Objective/Summary

Python Developer experienced in building and deploying REST APIs and backend services with Flask, FastAPI, and SQLAlchemy. Skilled in asynchronous Python (AsyncIO), MySQL/MongoDB, Redis caching, and Docker/CI-CD deployment, looking to contribute as a Backend Python Developer on production systems.

Education

Bachelor of Technology (B.Tech.) in Information Technology

2022 – 2026

Rajasthan Technical University, Kota

CGPA: 8.5/10

Technical Skills

Python:	Core Python, OOP, Data Structures & Algorithms, AsyncIO, Multithreading, Scripting
Python Web Frameworks:	Flask, FastAPI, REST API Design, JWT Authentication, SQLAlchemy, Microservices, ORM Design
Databases:	MySQL, MongoDB, PostgreSQL, Redis, Motor (Async Driver), Query Optimization, DB Indexing
Python Testing & Scraping:	Scrapy, BeautifulSoup, Unit Testing, Debugging, Web Scraping
DevOps & Deployment:	Docker, Kubernetes, Git, GitHub, CI/CD, Linux, Bash, AWS (EC2, IAM, VPC)
AI Tools:	Claude, ChatGPT, Gemini
Languages:	Python, C++, Java, JavaScript, SQL

Experience

Python Backend Developer Intern

May 2024 – Jul 2024

Datacube Softech Pvt. Ltd., Jaipur

- Built and maintained backend services in Python and Flask, contributing to feature development in a collaborative, fast-paced environment.
- Architected and shipped 10+ REST API endpoints using Flask & SQLAlchemy, cutting average response latency by 25% through optimized database indexing and query restructuring.
- Implemented JSON-based request/response handling and integrated backend services with MySQL for persistent data storage.
- Built responsive front-end views with HTML, CSS, Bootstrap, and jQuery, wiring them directly into backend endpoints.
- Used Scrapy and BeautifulSoup to build web-scraping and data-extraction pipelines, and supported debugging and application testing efforts.

Technical Projects

• Real-Time Log Monitoring Platform

[GitHub Repository](#)

Python FastAPI Flask MongoDB Motor AsyncIO REST API Terraform Ansible AWS

- Built a real-time log ingestion and analytics platform in Python, using asynchronous AsyncIO agents for efficient, low-latency file system monitoring across distributed applications.
- Developed non-blocking REST APIs with FastAPI and MongoDB via the Motor async driver, enabling scalable, real-time log processing and observability.
- Provisioned and automated AWS infrastructure using Terraform and Ansible, streamlining end-to-end deployment of the Python-based observability pipeline.

• Voting App — Python Microservices on Kubernetes

[GitHub Repository](#)

Python Docker Kubernetes Minikube Helm Redis PostgreSQL Bash Makefile

- Built a three-tier voting application backend in Python with Redis and PostgreSQL, containerized with Docker for consistent, portable deployment across environments.
- Deployed the Python microservices on Kubernetes using Helm and Minikube, automating rollout with custom Makefile and bootstrap.sh scripts.
- Cut deployment setup time by **85%** through one-command automation, and configured NetworkPolicies and PodDisruptionBudgets for secure, resilient workloads.
