Objective/Summary

Software Engineer with a strong foundation in DSA and OOP, and hands-on experience building backend systems and web interfaces using Python, Flask, FastAPI, and JavaScript. Skilled in REST API design, database optimization, and deployment with Docker and CI/CD, seeking a Software Engineer / Developer role to design, build, and ship reliable software.

Education

Bachelor of Technology (B.Tech.) in Information Technology

2022 – 2026

Rajasthan Technical University, Kota

CGPA: 8.5/10

Technical Skills

Languages:	Python, C++, SQL
Frontend Development:	HTML5, CSS3, JavaScript, TypeScript, React, Bootstrap, Responsive UI Design
Backend Development:	Python, Flask, FastAPI, REST APIs, JWT Authentication, SQLAlchemy, Microservices
Databases:	MySQL, MongoDB, Redis
Tools & Version Control:	Git, GitHub, Linux, Bash
DevOps:	AWS (EC2, IAM, VPC), Kubernetes, CI/CD (Jenkins), Docker, Terraform, Ansible, HTTP/HTTPS
Core CS Fundamentals:	Data Structures & Algorithms, Object-Oriented Programming, REST API Design, System Design Basics, Problem Solving

Experience

Python Backend Developer Intern

May 2024 – Jul 2024

Datacube Softech Pvt. Ltd., Jaipur

- Developed and maintained Python and Flask applications while learning backend development in a collaborative environment.
- Architected & deployed 10+ scalable REST API endpoints using Flask & SQLAlchemy, reducing response latency by 25% through optimized DB indexing and query structuring.
- Built responsive user interfaces with HTML, CSS, Bootstrap, and jQuery, integrating them with backend services.
- Worked with Scrapy and BeautifulSoup for web scraping, data extraction, debugging, and application testing.

Technical Projects

• Voting App — Kubernetes-Native Deployment

[GitHub Repository](#)

[Docker](#) [Kubernetes](#) [Minikube](#) [Helm](#) [Jenkins](#) [Nginx Ingress](#) [Redis](#) [PostgreSQL](#) [Bash](#) [Makefile](#)

- Automated end-to-end container deployment for a microservice-based voting application using Docker, Kubernetes, Helm, and Nginx Ingress, cutting deployment setup time by 85%.
- Built a Jenkins CI/CD pipeline for automated image builds and Kubernetes deployments, replacing manual release steps with a single triggered job.
- Automated Minikube provisioning and configured NetworkPolicies and PodDisruptionBudgets for secure, highly available workloads, enabling one-command deployment via `bootstrap.sh` and `Makefile`.

• Real-Time Log Monitoring Platform

[GitHub Repository](#)

[Python](#) [FastAPI](#) [Flask](#) [React](#) [MongoDB](#) [Motor](#) [AsyncIO](#) [Terraform](#) [Ansible](#) [AWS](#)

- Built a real-time log ingestion and analytics platform using Python, FastAPI, React, and MongoDB, enabling live observability for distributed applications.
- Developed asynchronous, non-blocking FastAPI REST APIs and Python AsyncIO log-collection agents integrated with MongoDB via the Motor async driver for low-latency ingestion.
- Provisioned and automated AWS infrastructure using Terraform and Ansible, streamlining end-to-end deployment of the platform.
