Objective/Summary

DevOps Engineer who designs and automates infrastructure using Docker, Kubernetes, Terraform, and Ansible, with hands-on CI/CD pipeline delivery through Jenkins and production deployments on AWS EC2. Comfortable working across the full deployment lifecycle in Linux environments, from infrastructure provisioning to containerized release automation.

Education

Bachelor of Technology (B.Tech.) in Information Technology

2022 – 2026

Rajasthan Technical University, Kota

CGPA: 8.5/10

Technical Skills

DevOps & Cloud:	Docker, Kubernetes, Terraform, Ansible, Jenkins, CI/CD Pipelines, Nginx, AWS (EC2, IAM, VPC), Minikube
Backend:	Python, Flask, FastAPI, REST APIs, JWT Authentication, SQLAlchemy, Microservices
Frontend:	React.js, Redux, JavaScript, TypeScript, HTML5, CSS3
Databases & Caching:	MySQL, MongoDB, Redis
Networking:	TCP/IP, DNS, HTTP/HTTPS, VLANs, NAT, DHCP
Operating Systems & Tools:	Linux, Git, GitHub, Bash

Experience

Python Backend Developer Intern

May 2024 – Jul 2024

Datacube Softech Pvt. Ltd., Jaipur

- Developed and maintained Python and Flask applications while learning backend development in a collaborative environment.
- Architected & deployed 10+ scalable REST API endpoints using Flask & SQLAlchemy, reducing response latency by 25% through optimized DB indexing and query structuring.
- Created responsive user interfaces with HTML, CSS, Bootstrap, jQuery, and integrated them with backend services.
- Worked with Scrapy and BeautifulSoup for web scraping, data extraction, debugging, and application testing.

Technical Projects

• Voting App — Kubernetes-Native Deployment

[GitHub Repository](#)

[Docker](#) [Kubernetes](#) [Minikube](#) [Helm](#) [Jenkins](#) [Nginx Ingress](#) [Redis](#) [PostgreSQL](#) [Bash](#) [Makefile](#)

- Automated end-to-end container deployment for a microservice-based voting app using Docker, Kubernetes, and Nginx Ingress, cutting deployment setup time by 85%.
- Built a Jenkins CI/CD pipeline for automated image builds and Kubernetes deployments, replacing manual release steps with a single triggered job.
- Automated Minikube provisioning and cluster setup via `bootstrap.sh` and `Makefile`, and configured NetworkPolicies, PodDisruptionBudgets, and local DNS/tunnel access for secure, one-command deployment.

• Real-Time Log Monitoring Platform

[GitHub Repository](#)

[Python](#) [FastAPI](#) [Flask](#) [React](#) [MongoDB](#) [Motor](#) [AsyncIO](#) [Terraform](#) [Ansible](#) [AWS](#)

- Built a real-time log ingestion and analytics platform with a React dashboard, enabling live observability for distributed applications.
- Developed asynchronous, non-blocking FastAPI REST APIs and Python AsyncIO log-collection agents integrated with MongoDB via the Motor async driver for low-latency ingestion.
- Provisioned and automated AWS infrastructure using Terraform and Ansible, streamlining end-to-end deployment of the platform.
